FOR PHOTOS (RASTER FILES)

Not all images were taken with a camera capturing all the detail needed to print in large scale. We will scale your file to make sure the resolution is good.

300 dpi at full size/scale is recommended. 150 dpi minimum resolution.

FOR ILLUSTRATIONS (VECTOR FILES)

We will confirm your illustration is a vector file. Vector files are made of lines and curves based on mathematical equations.

Your Company

Your Company

If the file is not a vector file, then scaling the illustration will result in low resolution.
